

Declaration of Technology Independence

National Centre for Industry 4.0 is an open platform which holds technological neutrality as one of its key principals. Technological neutrality means that while following all technological standards the Centre is free to accept or recommend any technology or principle of Industry 4.0 implementation it deems the most suitable to reach the desired results. The Centre selects and approves a suitable principle or technology that best fulfil functions required by a customer while this choice is governed by procedures defined in the Articles of Incorporation of the National Centre for Industry 4.0 and is not conditioned by other technologies used in testbeds connected to the Centre.
